

# Reproduction

## Picture Vocabulary

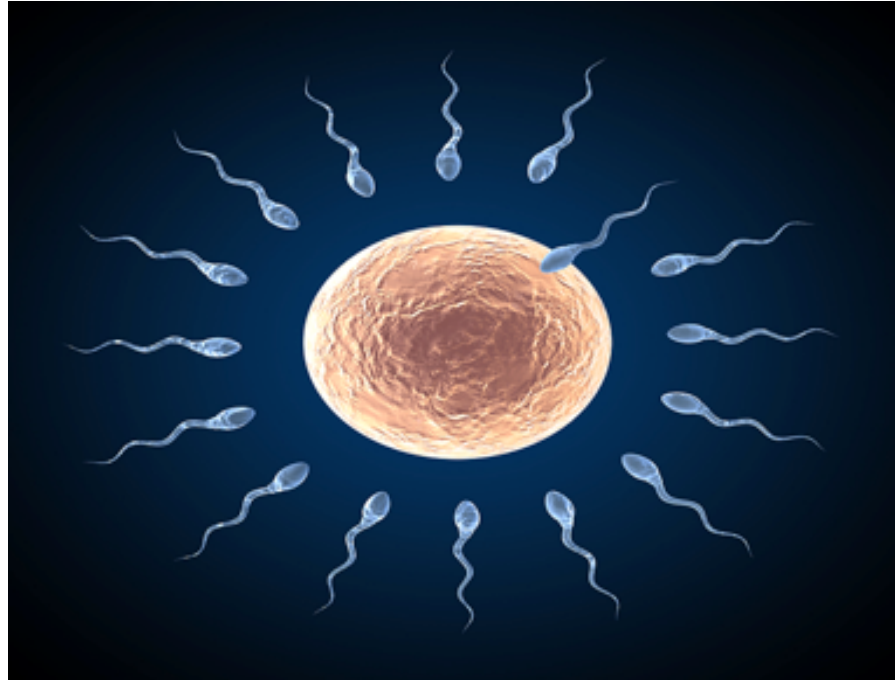

Organisms and Environments

# Asexual Reproduction

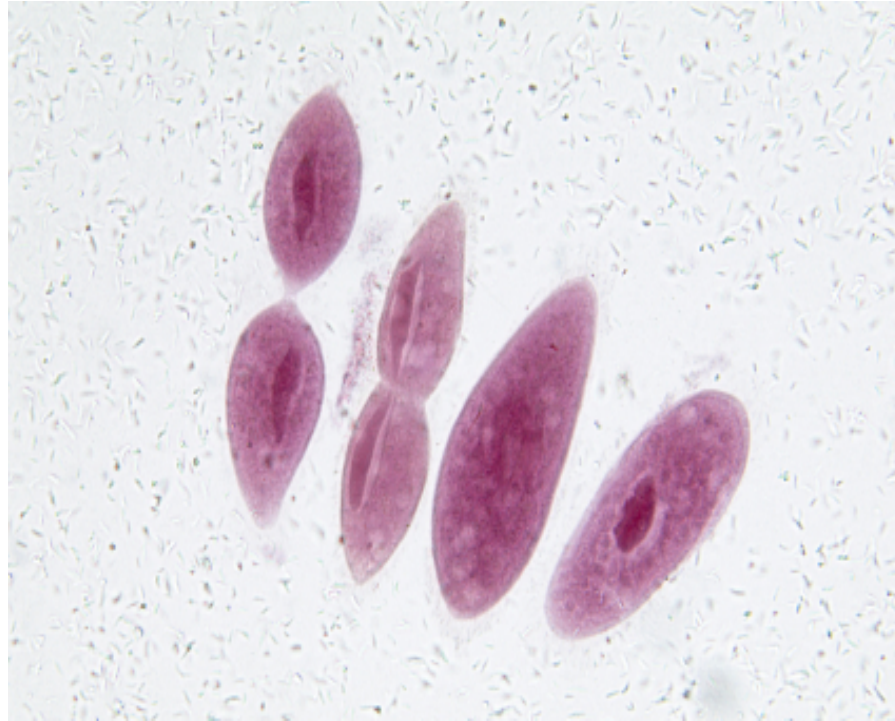

The reproductive process that involves one parent and produces offspring identical to the parent.

# Sexual Reproduction

The reproductive process involving two parents whose genetic material is combined to produce a new organism different from themselves.

# Binary Fission

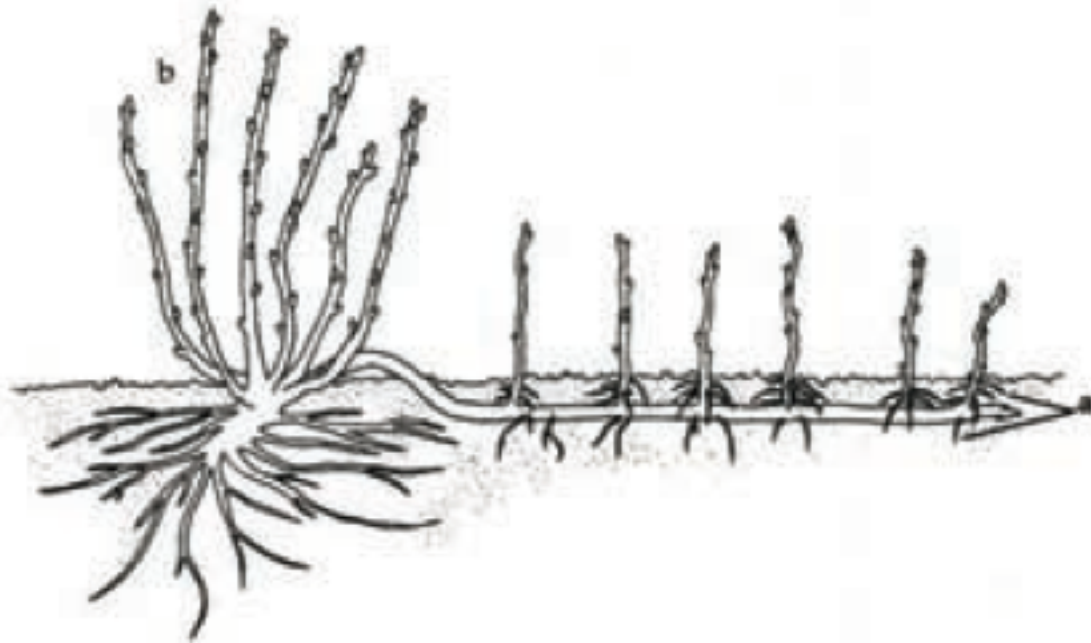

A type of asexual reproduction in which one cell divides to form two identical cells, such as occurs in prokaryotic cells.

# Budding

A type of asexual reproduction in which an offspring grows out of the parent organism.

# Vegetative Propagation

A type of asexual reproduction by which one plant produces new plants that are genetically identical to the parent plant.
